

UVER Platform-Topology of the management of multiple docking station

**1**

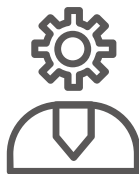

The server is used to deploy the UVER platform. (The server can be a cloud server or a physical server)

2

The UVER platform communicates between docking station and network (which can be multiple docking station) includes: instructions, real-time videos and photos.

3

End user can access the UVER platform to interact with the docking station and receive real-time videos and photos of the aircraft&gimbals.

4

This solution can support multiple terminals to access and manage multiple docking stations.

5

This solution is used for our company's public network deployment and private network deployment, such as DongHu High-tech District (Wuhan, China)'s integrated project and the project of public security.
